

# STUDY: Interventions to Address HIV and Other STIs Among Young Men Who Have Sex with Men

The UBC Youth Sexual Health Team is currently recruiting young men (ages 15 - 30) who have sex with men for our study in Vancouver, Kamloops, and Victoria, BC.

The purpose of this study is to better understand the experiences and perspectives of young men who have sex with men in Vancouver, Kamloops, and Victoria, BC, with sexual health services. In particular, we are interested in learning about your experiences with and opinions of BC Centre for Disease Control's *GetCheckedOnline* service. This information will help improve STI/HIV services for young men across the province.

Participants will be asked to complete a confidential 1 - 1½ hour interview with a member of our research staff, and you will receive a \$30 honorarium for your time.

Please contact Kyle Sutherland, Research Coordinator, if you would like more information about this study.
