

STUDY: Interventions to Address HIV and Other STIs Among Young Men Who Have Sex with Men

The UBC Youth Sexual Health Team is currently recruiting young men (ages 15 - 30) who have sex with men for our study in Metro Vancouver.

This study aims to better understand the views of young gay, bisexual, and other men who have sex with men in Metro Vancouver. In particular, we are interested in understanding your experiences with YouthCO's *Mpowerment* YVR program. By participating in an interview and completing a brief survey you can help identify what works best for you with *Mpowerment*, as well as what you think this program might need to look like if it were to be run in other communities in BC.

Participants will be asked to complete a confidential 1 - 1½ hour interview with a member of our research staff, and you will receive a \$30 honorarium for your time.

Please contact Kyle Sutherland, Research Coordinator, if you would like more information about this study.
